

Cancer imposes a great burden to the community. India contributed to 1 million new global cases in the year 2012. Burden of cancers in India is expected to be more than 1.7 million by 2035. Majority of these cases come to the attention of doctors at a late stage. There is a need for sensitization of medical community to the importance of cancer prevention and screening, as well as creating awareness in the public about the same. Hence, this symposium intends to sensitize medical professionals about the need for focus on Preventive Oncology.
